

Sockets for Pololu Buck Regulators:
#4891: D30V30F3 3.3 V 3.7 A 3.3 V - 45 V
#4892: D30V30F5 5 V 3.4 A 5 V - 45 V

The "power good" indicator, PG, is an open-drain output that goes low when the regulator's output voltage either rises more than 7.5% (typical) above or falls more than 9% (typical) below the nominal voltage (with hysteresis).
